

OK I CAN DO IT.

One final, and this year is over. All the studying, stress, and anxiety of finals week will finally be off my shoulders.

Why is this Bio final 150 questions long? All I want is to be tanning right now, not deciding what kingdom fungus is in...

BUT...

Pulling off an A in Bio?

I think yes.

Final exam periods are MUCH too long..

Two hours?! C'mon, I could be at the pool right now.

Now I'm just staring at these white walls and watching the clock hands move far too slowly.

BUT...

The bell rings and it's summer

Time for vacationing, time for swimming...

Time for driving to Chick-fil-a just 'cause you're craving waffle fries. And, most of all, time for freedom.

The bell rings and we flood the hall, screaming, laughing, cheering, and hugging our friends.

Can you believe we survived Felknor's notorious killer final?

We made it. We did it.

you know
WE LOVED IT.

LEARNING TOGETHER Riley Langer (12) participates in her class concentric circle for Elaine Grace's SLCC class. This activity gets classmates to work together and talk about what they are learning. "I enjoy these conversations because it allows you to view simple topics from multiple perspectives," Langer said. **BRIDGES AND POPSICLE STICKS** Cameron Cecil (9) builds a bridge in his Physical Science class. Cecil liked this lab because it was a good change of pace from many other labs. "We got to do some hands on work and we could pick our partners," Cecil said.

HARD AT WORK Lucienne Lebek (11) studies hard in the library during her off period. She jams to the sound of her headphones while completing her latest chem work sheet. "I like studying in the library at Monarch during my off period because it's really quiet and peaceful and I can get tons of work done," Lebek said.
