Challenge yourself to seek growth

Studying a new language is difficult, but is worth learning. In Spanish 1, students learn the basics of the language. In Spanish 2 and 3, students already learned the basics, and are improving their ability to pronounce, speak, and conjugate words correctly. Lastly, Spanish 4, known as the college level, is where students show mastery of the language. In order to really engage in what you are learning, you have to put yourself in that position or mindset. Spanish 4 read the book, *La Casa Embrujada*.

It is a book that takes place in Mexico about two men, Pepino and Panzon, who try to figure out what is happening at Senor Dalla's house. That house has been showing signs of possibly being haunted. "When reading this book it was easier to understand the plot by having to act it out. Not only to read it and understand, but to also have fun with it," explained Josh Lapp (12). Senora Griffin is sad to see the senior class leave. "This year's Spanish 4 class has had a big impact on me. They are the best Spanish class! They have grown since they first began their Spanish journey. I encourage many other students to come and learn Spanish. It's a fascinating language!" exclaimed Senora Griffin.

Make it happen

What are your goals this year?

Drake Kelly (11)

"My goal is to get good grades, especially in math because that is a difficult subject."

Joseline Espinoza (10)

"My goal is to finish strong with good grades, so I can end the year knowing I gave it my all."

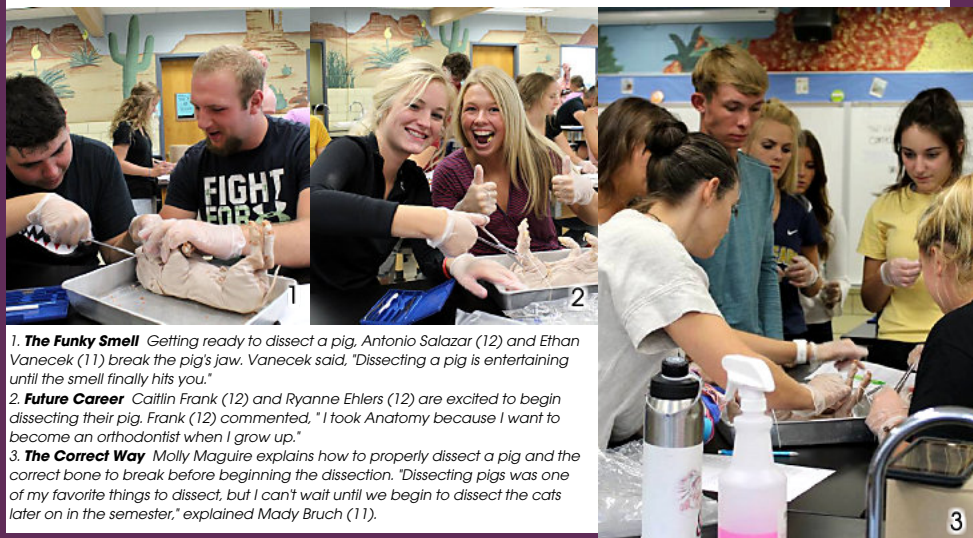

Allie Mellor (11)

"My goal this year would be to start and finish with a 4.0 GPA."

Breakin' Bones

There are many classes offered here at Eaton High School to help students further their education and their passions. Anatomy is an opportunity where students can learn how to dissect and identify various body systems. Mady Bruch (11), who wants to become a surgeon, said she took Anatomy because, "It is my favorite class and I can become more educated about dissecting because I want to be a surgeon in the future." Molly Maguire added, "Anatomy definitely takes a lot of work and dedication. Students come prepared everyday to learn something new because they have to learn, listen to lectures, and do preparation work before they are able to dissect."

1. **The Funky Smell** Getting ready to dissect a pig, Antonio Salazar (12) and Ethan Vanecek (11) break the pig's jaw. Vanecek said, "Dissecting a pig is entertaining until the smell finally hits you."

2. **Future Career** Caitlin Frank (12) and Ryanne Ehlers (12) are excited to begin dissecting their pig. Frank (12) commented, "I took Anatomy because I want to become an orthodontist when I grow up."

3. **The Correct Way** Molly Maguire explains how to properly dissect a pig and the correct bone to break before beginning the dissection. "Dissecting pigs was one of my favorite things to dissect, but I can't wait until we begin to dissect the cats later on in the semester," explained Mady Bruch (11).
