# A HELPFUL LEMB

## HOW THIS DESIGNER MAKES HIS MODELS

Designed and written by Annika Horne, Ella Stacey and Damon Warnick

While he creates his models, Alex Dunda (8) works on Computer-Aided Design Oct. 2. He has worked with this internship at The 3D Printing Store since Aug. 6 and will soon help make prosthetics for animals. "If they don't have a limb, then we take a scan of their limb and convert that scan into the 3D model and work around that to try and create a model that can help them," Dunda said. Dunda has learned more than how to 3D print. "I've learned a lot with collaborating with other people and trying to use critical thinking to help them in that process," Dunda said. Despite his newfound work with collaboration, he still had some struggles while he worked with customers. "They assume too much and we can't collaborate with them and we can't help them," Dunda said. Through it all he continues to work at his internship to print his way to the top. Photo by Ella Stacey.

"Some ways that I connect with my peers is joining clubs and doing school activities."  
Erin Putnam (8)
