OUR FUTURE CAREER

Aims Career Academy is an opportunity for juniors and seniors to earn an industry certification in order to be employable after graduation from high school. It is a competitive program available for Eaton High School juniors and seniors to apply. Counselor Laura Flood said, "It gives students more opportunities to earn college credit in different areas of interest." It is a form of concurrent enrollment so students can take college classes while still in high school and receive dual credit. Classes consist of local high school students rather than other classes that are a mixture of high school and college students. Career Academy gears towards career and technical education classes, consisting of audio and radio production, automotive collision repair, automotive service technology, aviation, EMT, fire academy, health & science, med prep, and welding technology. "Students can go into the workforce right away and it looks better on resumes and [they] get paid more right off the bat," said Flood. It aims to give students a head start, making them certified for certain full time jobs right out of high school.

BLOODY & BRUISED// Senior Andrea Rincon experiments with makeup prosthetics for fake medical scenarios. This technique is used to teach students how certain injury situations would look, so they would be able to tell what the patient is experiencing.

BURNING UP// Willis Grable (11) actively engages in the Aims Community College Burn House. "It's fun and all, but it's different than high school because it's a lot tougher," said Grable.

Customer is allowed to have objects outside of the margin.

AIMING TO LEARN//

- 1. BURNING METAL//** Senior Conner Lewis welds at the shop at Aims. "I am looking forward to my progress getting better and better each day," said Lewis.
- 2. GROWN UP//** Senior Andrea Rincon and her Aims Med Prep classmates familiarize themselves with the inside an ambulance. Rincon said, "I love it and you are held to a bit higher of expectations giving it a more grown up feeling."
- 3. CRASH//** Senior Feliz Martinez and her classmates learn how to properly take off helmets in the case of an accident.
- 4. CORN STARCH//** Feliz Martinez (12) and her classmates demonstrate a fake drug overdose scenario with corn starch. Martinez said, "It's a very positive program. It's really fun, but it's also really stressful. There is just also a lot going on all the time."

TECH INTERN IN THE WORKS// Some students at Eaton High School take on the opportunity of being a tech intern. Tech interns learn all the basic information of software, programs, analytics, and skills involving computers and our school network. "I became a tech intern in my junior year and it was simple. The tech department was looking for interns and advisors asked if students would be interested. My advisor asked me if I would be interested. I said yes, and I was put into the internship," said Justin Mendez (12). (Photos by Ken Daniels)

GRAPHICALLY SPEAKING//

Senior Abby Schreiner is a part of the graphic design program at Aims. The class consists of sketch book designs and final projects. "I feel like I'm finally studying something that is truly going to apply to my life outside of high school," said Schreiner.
