

Intro:

You may know about the draft in class that Rampart offers to students, but did you know that this semester rams are doing something a little different? Students are designing and building their own bridges using their knowledge of architecture. Kram decided to dig a little bit deep on when this intails

Segway:

When creating these bridges students have a detailed thought process that goes into it things such as stability, complexity, and overall design are all factors when building these bridges

Segway:

After students broke the bridges, they been calculated the efficiency of the bridge this way they can figure out what they can improve on for next time.

Segway:

Before the bridge, breaking students predicted how much they believe their bridge would be able to hold.

Outro:

We wish you luck on all of your future endeavors in the drafting classrooms. This is been Maddy Szpunar reporting for Kram.
