

# JOURNALISM Delivers

The Newspaper's Distribution. After weeks of collecting photos and interviews, the newspaper is printed and ready to distribute. "We usually all meet up in the morning and will get donuts and then we will spend the whole hour folding newspapers. Distribution day is always relieving, it is a lot of fun too. Just to walk around the school especially after distributing, seeing people reading the newspaper, it's just amazing. I have had people stop me and say, 'this is really cool!' or 'who took the picture for this' or 'I didn't go to that event, it is cool to see that it's covered just to see what happened.' It's cool to see the fruits of your effort," shared **Maddie Leyba**, Editor-in-Chief of the newspaper. **Memphis Larson** explained that he loves distribution day because he and the journalism team get "to share something that we've worked very hard on and it's nice to get some recognition. My favorite part of journalism is hearing people's stories and seeing and writing about what's going on in the moment." The newspaper has had a significant impact on the school community and many students look forward to distribution days.

## mad skills

My snowboard is basically a woman playing a guitar and I have a lot of smoke on it, took me a lot of time and it's in Adobe Illustrator. My board was based on passion and mastery that I see in the musical field, personally I feel that in my art. I like how unique and how different every artist's work is and I think that's what makes it so an amazing field to go into, just being able to create it for other people but also for yourself and just bring new things to the table and the world.

Maya Ross

## program perfection

**Coding Camp.** Students in Computer Science Honor Society host a coding camp to share their love for coding with younger kids while teaching the new learners how to code. High schoolers were able to reminisce about their youth as they laughed with the kids and helped create cool activities. **Damian Robinson** talked about his experience with the camp, "It was good, I got assigned to a group where we helped kids make posters and it was fun seeing all of their ideas." **Riker Hopkins**, who taught at the CSHS Coding Camp with **CJ Stanberg**, shared, "We all had a great time organizing the events for the children. We were all super excited to be able to do it. It was second time so hopefully it becomes an annual thing, even once a lot of us seniors leave. It was super cool to be able to teach these kids computer science in a fun way."

**Grace Douglas and Gianna Gagliano** spend Zero Hour folding newspapers to prepare for distribution day.

# gaming club

**Get Your Game On.** Gaming Club offers students the opportunity to play board games with their classmates and make unlikely friends. The students who attend usually don't know each other beforehand, but after collaborating and playing together, all club attendees become fast friends. **Brendan Hawes** shared, "I like the people at the Gaming Club, I mostly go to hang out with them, the games are kind of why we are there but I don't view it as the main point of the club and I also like that some people bring snacks. I know a lot more middle schoolers than I thought I would and I was able to reconnect with a friend that I used to have. In the Gaming Club I am able to improve friendships I already have and make new ones." The members are very enthusiastic about the games they get to play and the friendships they are able to forge.

# Learning government

**Learning the Ropes.** Students learn how the US government functions in the government class taught by Mr. Thimsen and Mr. Carwin. "It's a hard class but it's been fun because we get to learn about government and being able to vote. Overall the kids in my class are really great so that makes it fun," **Avah Berlin** shared. This class can be very controversial, but some students really enjoyed discussing the controversial topics. "I really liked the lesson about political beliefs, we had to take political quizzes and find where we stood according to each of them, it was really interesting," **Jonathan Nayberg** explained. This class provides students with an in depth understanding of the different systems of democracy. **Serhii Li** was able to get a new perspective on a different type of government in the class, "The US government is an interesting class, and it is required for my program to take it. I think it is interesting, because since I'm a foreigner, it's very important to know how the governments of other countries work. What I see is that the US government isn't really different, the only thing that is very different from Ukraine, where I'm from, is the Judicial System."
