

# Facing The Ninja Warrior Challenge

Fall Crawl is an annual event that Sunset does every year. This year we brought in a ninja course that was put up on the soccer field outside of our school. Each lab class went out to the ninja course at a different time and had 20 minutes to go through the course. Students had a chance to complete the course twice. The best part was popsicles on a hot day. This event was also a fundraiser, raising money for the school.

The students had an option to donate to the school and many people did! Sunset in total raised over \$10,242! Sunset PAC is planning on using this money to give out sports scholarships and provide teachers with meals during Parent-Teacher Conferences. The money will also help out the robotics team!

Top Of The Wall

## Moments

**Running To The Top**  
One cool feature of the obstacle course was a warped wall at the end. There were two walls, of different heights, challenging students to complete both. After finishing all of the other obstacles, students used their speed to run up the steep wall. Then, they grabbed the rim and pulled themselves on top. This was an exciting feature that students looked forward to.

The ninja warrior course consisted of many obstacles. Like the television show, *American Ninja Warrior*, students' goal was to complete the course without touching the mats underneath. They raced their friends to add another aspect of fun. The obstacles made students think quick and use their athletic skills to jump, swing, and balance. Music played in the background making this fun experience even better, as students raced to the finish, trying to beat their competitor.
