ARTIFICIAL ASSIGNMENTS

TEACHERS AND STUDENTS FACE A NEW FORM OF ACADEMIC DISHONESTY

As Artificial Intelligence technology advances, teacher and students see far more of it in the classroom.

Now more than ever, teachers are faced with students using AI to complete assignments or plagiarize.

"I have had a few students get caught for using AI and the result is the same. They are not learning the material," Mrs. Sara Cady said.

Students can give AI such as Open AI or Chat GPT, a command to write an essay or do an assignment and receive the results with seconds.

"For certain classes like English and such you can use AI. I do use it to help me generate some writing ideas and useful tips and formatting advice," Scarlett Beerbower '24 said.

In some classrooms, AI is used as an essential learning tool.

"I'd say AI can have a positive impact because you can use it to answer questions on an assignment," Clara Brant '27 said.
