

5. gilliant Penny Urquhart (12) shows off the eel that her group was dissecting. The lamprey eel has a unique head that gives it a nickname the "nine eyed eel". "It was kinda smelly and slimy but overall super cool." stated Urquhart photo by ella peterson

4. fishtabulous Carefully inspecting the insides of the shark, Daniel Berumen (12) and his crew uncover new facts about the animal. Berumen, thinking back, shares "It was really cool. Zoology is a great way to learn a lot of crazy stuff." photo by ella peterson

1. o-fish-ally stinky Before beginning their dissection in zoology class Sydney Robbins (12) carefully choose the perfect place to make the first cut. They were completing one of their many dissections on a unique marine animal called a lamprey. "Zoology is so much fun. I thought it was going to be smelly but it wasn't as bad as you'd think." Robbins described. photo by ella peterson

some-fin special

zoology class is learning about the anatomy and reproduction of creatures, by dissecting

Ms. Mann's 7th period Zoology class gets their hands dirty as they dissect and study marine animals. "It was super cool but pretty gross," said Kanye Smith (11). Excited for the semester to come, Smith exclaimed, "It took me a while to get used to everything, but I can't wait to learn more." As students made their way through their shark lab, many were surprised as they discovered that their cadavers were pregnant. "Our shark was super pregnant and we were able to take the baby shark out," said Hayden Habitz (12). "I love our activities in Zoology class. We always get to learn something crazy," remarks Habitz. As the

semester draws on, the Zoology class has three more dissections planned, and will continue their study of the behavior, structure, classification, and distribution of Earth's animals. "I'm excited for our next dissection which will be a turtle," said Reilly Reddy (12), "There are such cool animals and I can't wait to study more about their life and structure." When asked to reflect on his time in Zoology Class, Fernand Mirando (12) had this to say, "I never thought that I would enjoy Zoology as much as I do. It's crazy how complex animals are."
